MENURANDUM FOR 1 Project Director

SUBJECT

25X1

25X1 25X1 : Sampler and Weather Instrumentation

l. The latest information we have regarding our sampler of Lockheed called on 21 June to say that is that a proposal has been forwarded to this office from Lockheed. Through their oversight they failed to get this proposal in on time. Preliminary estimates indicate four units can be built in 3 or 4 months after firm go-shead from us. Apparently 500 hours of engineering details are required prior to sutting of metal. cleared personnel can assist us a great deal in getting this sampler properly finalised and in the desired and results.

2. On the second set of weather instruments, Air Force has already authorised \$100,000 to WADC for development of the Mark-2 meteorological packet. says he will personally follow with to be sure this project doesn't beg doesn. I would guess that this instrumentation would not be ready until around Christmas, based on my experience of the way WADC moves.

Deputy Project Director
